Paper No: 1

Question 1:

[2 marks] Create one database and then write SQL statements to create, in this database, all tables derived from the ERD given in the following picture with appropriate attributes, primary keys and foreign keys.

NOTE that when creating the SQL commands as request, you MUST keep the name of tables, relationship, attributes and data type of attributes as SAME as given in the given ERD.

Attributes with underline belong to the Primary Key of each entity.

Attributes which reference to the primary key of another table must have the same name as the attributes in the primary key of the referencing table.

When submitting the responses for this question, submit only SQL statements for creating tables with corresponding keys and foreign keys. Do not use "create database", "Alter database", "use database_name" or any statements using database's name in your submission.

[0.5 mark] Write a query to increase the price in the product table by 10% if the current price is lower than the selling price (increase only once even if the product has been sold multiple times).

Question 9:

[0.5] Write a procedure named `proc_insert` to add a new employee.

Input parameters: `@employee_name`: name of the employee to be added,

`@ salary`, and

`@supervisor's ID`.

If the supervisor is already managing 2 or more employees, display 'no insert', otherwise, insert the new employee's information.

You can use the code below to test the procedure
